March 12, 2017

On March 11, 2017, I was the Pilot In Command of a Cessna Caravan (N865MA) during a morning commercial flight from Honolulu to Kalaupapa airport, located on the island Molokai. I was carrying eight passengers, with one seated in front next to me. Winds were relatively light and overall weather conditions were VFR in spite of a persistent haze, with scattered cloud layers reported at 2,500 and 4,500 feet.

When approximately 7 miles from my destination, along the "north shore arrival" for a straight in approach to runway five, I overheard a radio transmission indicating that there was an aircraft in the pattern at Kalaupapa. A male voice stated that he was "base for runway five at Kalaupapa".

I advised that I was a Cessna Caravan on a 7 mile final for runway five. A male voice responded to my transmission and in broken English, stated that he would "land and clear the runway".

I advised him that I would conduct a "360" degree turn from my present position and do an extended left base to final to give him time to back taxi and clear the runway (due to the lack of taxiways at the destination airfield). He responded "okay, okay".

After conducting the above maneuvers, I radioed the other Cessna pilot that I was "base to final" and requested confirmation that he was "clear of the runway".

The other pilot then stated he was "clear off runway".

Thanking him, I proceeded with my approach. Having completed my pre-landing checklists, I proceeded with the final descent for landing. Passing through 250 feet agl, the aircraft experienced a left rolling tendency which I immediately corrected for with proper control inputs and a slight addition of power. Descending through 150 feet agl, it again rolled slightly and, once again, I corrected with appropriate control response

Approaching the transition to landing, I detected motion at the opposite end of runway five and immediately observed what appeared to be a rotating propeller pointed down the runway in our direction.

I immediately added power to "go around". My aircraft yawed left and I attempted to correct while maintaining a climb attitude. The aircraft refused to climb and immediately dropped, impacting the runway midway on the bottom of the airframe. After bouncing once, it continued its travel in contact with the runway.

I applied left rudder pedal to steer the aircraft off the runway and out of the way from the other aircraft's possible flight path. The Caravan exited the runway surface and I continued to apply left rudder, which I believe induced a left ground loop.

After coming to a stop, I proceeded to shut down the engine. Exiting my seat, I walked into the passenger compartment, opened the main cabin door and was assisted in doing so. I then assisted a wheelchair-bound passenger in exiting the airframe at the rear of the aircraft.

Upon establishing that my passengers were all uninjured, I was approached by the airport manager. The manager stated that he had been confused by the pilot of the other aircraft's actions and had tried to call out to him on the radio to also confirm his location and that he was, in fact, clear of the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Greater emphasis on emergency training in aircraft type, especially regarding runway incursions and "go arounds" at shorter, uncontrolled fields, particularly at near max weights. Greater emphasis on clearer more complete communications by pilots at uncontrolled fields. Added time in type prior to single pilot commuter operations.

Incorporated with this report, but attached as an e mail attachment, is a copy of the hand written statement I prepared at the accident scene about an hour and a half after the accident at the request of Schuman Aviation Company owner Ricard Schuman.

Reviewing my statement, I would only note or add that I can not recall ever hearing the stall warning go off during this event.

Information concerning maintenance programs followed or the most current dates of required inspections etc. are unavailable to me to include in this report as aircraft logs are in possession of the local FSDO.

The latest data still available to me is from a copy of a Daily Flight/ Maintenance Form i have, dated 2/18/2017 (3 weeks before accident) which indicated Air Frame Time as 7753.1, Engine time as 816.3, Prop time as 1856.9, AF Cycles as 19355, Eng Cycles as 618.0, Pitot Static 1/31/2018, TXPD 1/31/2018, ELT 2/28/2017 and ELT Bat as 12/31/2017

The Engine Trend Monitoring Form on 2/18/2017 stated 100 hour (due) 7853.1 with 100 hours to go. 400 hour was at 7853.6 with 100.5 remaining, Fire Ex due 3/1/17, GPS 3/2/17 and 800 hour Insp/ eng OH 7853.6 (101 Remaining).

Passenger identities/ Flight manifest are in possession of local FSDO.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE**Date of this Report**03/22/2017
