Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear, noes bowl, bottom cowl, carb air-box, windshield, air-filter housing, and minor damage to spinner cap and top cowl.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I had decided to sell my plane and wanted to do an Annual before trying to sell. To do the annual at this time at my AP's repair location the plane needed to be moved from Soldotna airport to a private air strip, known as Gaede Airstrip. I went to the Gaede airstrip to drop off my bicycle to ride back to the Soldotna airport to pick up my truck. While I was at the Gaede strip I checked the wind on the runway and it was light and straight down the runway. I returned to the Soldotna airport for the flight over to the Gaede strip which is approximately 3 to 4 miles apart. I began getting the plane ready for the flight and extra time was spent because the plane had not been flown for awhile and the engine was cold. After a extensive walk around and engine preheat I taxied over to the fuel pump for gas. The pumps were busy with other aircraft at the time so I taxied around the airport to warm the plane more and continue to check out the controls. When pump was cleared proceeded to go get gas and added 10 gallons of 100LL to each tank. I taxied over to the runway and did a run up and everything checked out fine so I broadcast my intentions and took off for the Gaede strip. When I arrived at the strip I checked for runway traffic and noticed the wind had switched to a crosswind. I started my downwind and after the base turn added one notch of flap and continued to final and noticed I was a little high and a little fast. I still felt I could make the runway without any difficulty and thought that the speed, because of the crosswind would be to my advantage but by doing so I landed farther down the runway than I anticipated. I applied the breaks but they didn't have the needed effect because the temperature had warmed a little and the runway was very slippery. By this time I realized I couldn't do a go around so just kept the plane under control the best I could until I hit the snow berm at the end of the runway. The berm was very hard and when the nose hit the tail came up fairly gently because the aircraft had been slowed considerably. As you will notice in the picture the tail was still high and was at a approximately a 45 degree angle to the snow and we had to use a ladder to reach tail to attach a rope to right the plane. I checked myself out and found no injuries. Opened the door and got out of the plane, by this time the airport manager which seen me hit the berm came to see if everything was ok. We assesed the area and for safety reasons decided to move the plane because of the nearby road, lots of people were stopping and looking, and any other possible aircraft traffic. Later that day I was contacted by the state troopers and Jeff Berch from FAA. I am sending 2 pictures taken before we moved the plane. If you need any additional information please contact me.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Not landing on shorter slippery runways. Also by keeping up with requirements for safe flying.
