Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing, both left wing struts, upper tail section frame damaged, fabric torn. Headliner torn and damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Taxied to aircraft preflight departure area, performed normal preflight aircraft checks per checklist and aircraft control surfaces checks via control function tests, operation of ailerons, elevators, rudder and instrument checks were normal, instruments settings were made.

Taxied aircraft to departure area and held in line behind one other aircraft. Following departure of all other aircraft moved to departure runway position. As soon as first aircraft became clear and airborne, increased power for take off. Aircraft roll was normal to a point where it started to drift to the left, I straightened the drift to the left and then shortly after the aircraft violently turned right and was leaving the runway. I cut the power and then the aircraft nosed over. I immediately turned the master power switch to the off position.
