NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N7945V departed Murray Airfield KEKA at 0821 on Wednesday April 12 2017 with myself and my wife, Gretchen Scott onboard - prior to departure the plane had been at Murray KEKA overnight - 4/11/17 - Previously on 4/11/17 we had departed full inboard fills from KMMV at 5138.57 on Hobbs we had stopped at Arcata KAVC - filled up inboards - there are inboard and outboard fuel caps on each wing- outboards require a tall ladder or similar- I used inboard fill caps both sides - 56.69 gallons added - Tach Time 5141.35- That is a 2.78 reading on the Hobbs and 20.4 GPH average - calculated from previous flights..& for flight from KMMV to KKACV- we then flew 00.82 tach time to Murray KEKA for an overnight - Tach Time 5142.18 in the morning prior to departure on 4/12- Tach time at end is 5144.59 -- 3.24 hours total tach time from full fuel inboard at KAVC to engine quitting - 3.24 hours on the Hobbs with full tanks inboard at 20.4 GPH = 66 gallons-----Tanks are placarded for 37 gallons each and more than that has been added to each tank in the past--- Weather was checked starting in Arcata at our hotel at 0700 for the flight and I continued using my iPhone and iPads AEROWEATHER APP, Radio in Airplane and ADBS - IN antenna with my iPad FOREFLIGHT in flight- to monitor weather enroute - on 4/12/17 we untied the aircraft - wings- floats, tail, removed chocks, checked fuel levels visually by looking into tanks at the inboard fills - sumped tanks, checked oil, did visual inspection of aircraft and boarded aircraft - we started up, taxied and did normal run up and departed runway 12 - Destination was Petaluma O69 - Santa Rosa was an alternate- waypoints enroute took us along coastline and past KLLR - Little River and Ocean Ridge E55 to Mussel Point and Salmon Creek and Tomales Bay area for a turn inland to Petaluma - The ceiling dropped in front of us as we approached this area and I decided to turn around and head back to KLLR - passing back over Point Arena north bound -the engine quit suddenly -no sputter or shudder - We were at 1500 AGL travelling at 130 knots ground speed over Point Arena and approximately 9 minutes and 19 miles from KLLR at the time the engine quit - I turned back promptly towards the south over Point Arena and land - multiple attempts to restart the engine were not successful - fuel selector was on both tanks- electrical system was functional- There were large flat pastures directly in front of us and I headed towards a big open field, we were able to maintain a good glide (for a 180 on amphib floats) and landed with our landing gear down under EDO 2790 Floats - we rolled for a good distance before encountering very soft and wet conditions and were hit by a gust from our left side - the front right caster wheel broke off and @ 100 feet further along another gust hit from the left and the right float dug into the muddy soil and the plane then flipped- turned upside down while still moving forward..- Flipped over on its back - hit on tail and settled upside down- During the flight we had flight following with squawk code 1742 with Oakland. I received a phone call from them around 15 minutes after landing. After the plane flipped over-We both exited easily thru the pilots left side door - Power Master Switch was turned off and fuel selector to off. Shoulder and Lap belts are very important !! Once I made sure all was ok physically with my wife - I called a pilot friend in Petaluma for phone numbers and advice - I then called 911 to report the situation and inform them that there were no injuries and no emergency. We landed at @ 1051 - temperature and dewpoint were not recorded - the air was warm - @ 70F and it was a little humid - and breezy

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The engine quitting has to be examined when plane is examined. If there is no fuel onboard - or very little found - then it is my error in not calculating enough reserve fuel onboard - or there was a failure in the fuel delivery plumbing- my recommendation can only be to not fly a plane without adequate fuel on board (one hour minimum reserve) to make it safely to a safe landing place. suggest in remote areas - USE ALASKA RULES, never fly further away from a fuel spot than you have fuel to do a 180 turn and get back to it. The incident could possibly have been prevented by landing at an alternative airport and or on the water prior to the engine quitting - also topping up the tanks prior to the morning departure and or stopping at KLLR southbound - The tanks had been topped up the day before inboard and the plane Tach time prior to flight on the day of the incident was point 82 from full fuel inboard fills and was visually inspected on morning of departure and tanks sumped. My calculations and fuel gauges showed there was fuel onboard when the engine quit - not a lot - but enough to get us to KLLR - my advice is to be much more conservative - do not rely on fuel flow meters , fuel gauges- especially when breaking in a new engine that is burning more fuel at the same setting as the old engine - Stop and Top up if in doubt - learn and adjust ones mind set and calculations quickly to a new fuel burn rate. Before we turned back for KLLR - there was a sheltered bay in front of us - Tomales Bay we could have landed in - there are restrictions for wildlife there - and we were not in emergency mode at this time - yet it was an option - plus there were 3 airstrips - 2 private - one public where we could also have made a safe landing prior to the engine quitting on route to KLLR from our turn around spot

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

YES and NO - The engine is mechanical - The engine quit operating - I call that a mechanical failure - the reason is still to be determined - The engine has 17.09 hours since new - The plane was inspected after initial hour flight with new engine and again with an oil change after 3 hours

Tanks were filled inboard fill caps the day before at KAVC with 56.69 gallons - then there was .82 hours tach time flown KAVC to KEKA - Morning pre-flight - Sumped Tanks - Visually Checked Fuel in the 2 tanks - drained engine fuel drain and checked oil level

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

There was no Weather Observation Facility at the landing site - it was clear - breezy from the south - warm and humid - I do not recall the altimeter setting

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
