

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: WOLLY SPRING OF ST. LOUIS AIRPORT State: MO

ZIP: 63005 Country: UNITED STATES

Latitude: 38° 39' 26.39" N Longitude: 90° 39' 4.19" W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: APRIL 24, 2017
mm/dd/yyyy

Local Time: 3:31 PM

Time Zone: CENTRAL

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N614WB

Manufacturer: LUFT AIRCRAFT

Model: JA30 SUPERSTOL

Serial Number: JA422-11-14

Year of Manufacture: 2015

Amateur-Built: ☒ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1320 lbs

Weight at Time of Accident/Incident: APPROX 850 lbs

Number of Seats: 2 Flight Crew Seats: 0

Cabin Crew Seats: 0 Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

PLEASE SEE ATTACHED STATEMENT.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

PLEASE SEE THE ATTACHED STATEMENT.

Description of damage to Aircraft and other property.

Item #1 My Kiev Prop (when my L gear folded under it hit the pavement)

Item #2 My left Main Landing Gear. (It folded under a side load when I ground looped).

Item #3 The Left outbd wing tip fairing.

Item #4 The Left Aileron outbd edge (however it's still functional, but will be replaced or repaired)

Item #5 The left wing. Some oil canning on top of the wing. Located at the midway (center point) just aft of the leading edge. I suspect the weight of the plane and the ground loop bent the wing up slightly at the midway point. Further detailed inspection will be required to know for sure. (This wing will in all likelihood be scrapped and replaced with a new one rather than go through any extensive repair).

Item #6 There is some noticeable damage to a steel cross member in the cockpit. It runs overhead fwd and aft and connects to where you hang your Headcom's.

There is a slight bow to it. We suspect that when the landing gear failed the stress load traveled up through the landing gear attach point and compressed the frame a bit, Fwd To Aft.

Item #7 I have a Lexan canopy overhead and on the right hand Aft side of the canopy it's bent and compressed. I'm not sure what caused this. I believe once the fuselage is put back in the jig to check for alignment will have more answers on this and maybe some in other areas as well.

Item # 8 There was no damage to other property.

Note; The frame work on the Just Aircraft Superstol is (very stout) Looking at the fabric on the rest of the fuselage I'm not seeing any evidence of structural damage elsewhere. If there was, I would see torn or wrinkled skin. All the structural members appear to be straight. But again the jig will confirm this.

Narrative History Of Flight.

Per your request I'm submitting a written statement concerning the incident involving my Just Aircraft Superstol N614WB which occurred on April 24, 2017 at Spirit Airport KSUS on runway 8L.

I departed Spirit around 10:00 AM and flew to KSAR Sparta community airport-Hunter Field in Illinois for some refresher training in landings and general aircraft management without incident. Winds were reported calm.

Very simply, upon returning to Spirit Airport the winds had now picked up and were coming out of the south, I don't recall the reported speed. I was instructed to land on runway 8 left. After several attempts I felt I needed to explore my options. I requested to land in the grass at the base of 8L and was denied even though my aircraft is designed for off field landings. The tower suggested IHO Creve Coeur Airport as an alternative. As PIC I felt while I still had 30 minutes of fuel remaining I could make Creve Coeur but I wasn't comfortable attempting that due to the fact I would then be low on fuel and was concerned about running into more wind there as well.

So I decided to go around one more time and hope the wind had changed, if not I was going to declare an emergency and land in the grass and deal with the fall out later.

On my final approach the windsock indicated the wind was now coming from the East and slightly South. I thought Thank God, I was confident in landing the plane. My wings were level and everything was smooth but upon touch down and my roll out (a cross wind started pushing the aircraft and tail left) causing me to ground loop to the right.

I would like to submit, there isn't a written procedure that my tail wheel should be locked or unlocked. I've flown my plane extensively in training both locked and unlocked in cross winds, again without incident. In this case however it was unlocked and my considered opinion is with the combination of changing winds and the added security of my tail wheel not in the locked position there was a burst of wind that caught me at the right point where my rudder authority had dissipated and caused me to ground loop.

My plane was performing perfectly on the 24th and I felt confident in my abilities but sadly things went sideways, no pun intended.

Thomas B McGrath

Recommendations (How could this accident/incident have been prevented?)

As we all know hindsight is 20/20. Looking back I wish I had declared an Emergency and landed in the grass at the foot of 8L (directly into the wind) with a 3-point landing, full flap and around 30 knots. This is what my aircraft is designed to do. I would have rolled out in maybe 2 to 3 lengths of my plane and that would be that, short of a conversation with the local FAA.

Since the winds were up I elected to come in on 8L per my training in a wheel-landing configuration, slightly faster to combat the wind. But this makes for a longer roll out. Plus my Tail wheel was not in the locked position, which I generally have locked. (There is no set rule / procedure to have the tail wheel locked or unlocked, its pilot preference). Once the tail is planted it just adds an extra margin of safety. Lots of pilots scoff at this but I'm here to say, while I'm a low time pilot I've flown in plenty of crosswinds in the mountains of North Carolina, the locked tail wheel works. (I'm adding it to my Before Take Off Check List).

The second option would have been to leave Spirit Airport KSUS and fly to Creve Coeur Airport 1HO. My concern with this was remaining fuel on board and running into issues there as well.

In the end due to a neighbors hanger fire when I initially arrived at Spirit and damage from that to my aircraft and two knee surgeries I had not flown the plane in 7 months. While I was confident (not cocky) in my abilities, maybe I should have flown it to Sparta IL or Creve Coeur Mo. Tied it down there and over a period of time flown off their grass strips to get reacquainted with the aircraft.

Having spent 2015 building the plane away from home and part of 2016 getting my license the last thing I would ever do is take a chance on wrecking my plane and becoming another statistic. Yet here I am.

Additionally, Spirit Airport is not interested in putting in a grass strip or allowing someone like myself to land in the grass adjacent to the paved runway, why? The pavement is hard on bush wheels and unforgiving when landing a tail wheel aircraft. This is common practice at other airports and it works out just fine. There are plenty of tail wheel Aircraft at Spirit but they strongly cater to the corporate community. It's discriminatory and needs to change. And I felt that way prior to my accident.
