Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Right Wing outer 1/3 a few inches wide on leading edge, crushed nose cone, crumpled and broken skin behind landing wheel on bottom and lower side of fuselage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My flight was in a Schweizer 1-34R single seat glider, N2682H. I took off at 1:30 PM by means of Aero Tow from Blairstown, NJ Airport 1N7. Conditions were VFR with 10 mile visibility. I flew a local flight staying within gliding range of the airport at all times. I released at 2,500 agl and attained a maximum altitude of 6,000 agl.

I flew for 2 hours 10 minutes. I entered the crosswind for runway 25 on the grass at 1400 agl, and was at the IP or pattern entry for my downwind leg at 1,000 agl.

At the time of pattern entry, winds were from 240 at 18kts gusting higher. I maintained an appropriate airspeed for the conditions present.

I encountered turbulence and heavy sink on the downwind leg. I turned base and did my best to avoid the trees. I then turned final. There is a soccer field with several moveable goals before the runway threshold. I was still in heavy sink and now a strong and gusting headwind. I was able to clear the first goal post. I did all I could to clear that last goal, but was unable to do so. My wheel cleared but the bottom of the fuselage hit the top of the goal post. This caused the glider to go nose down and I impacted the ground.

There was no one on the field. The police arrived, I answered all questions and declined medical help. I contacted the Allentown FSDO which was closed, the message gave another number to call and I did so. I was given permission to move the glider. The glider was disassembled, loaded onto its trailer and brought back to the field.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Given the turbulence and sink I should have entered the pattern higher. This would have given me many more options. In the worst case if I was high on final I could have initiated a controlled slip. I underestimated the effect the turbulence and sink would have, I had a strong tailwind which greatly increased my ground speed, and then turning on final it was an almost direct headwind, which decreased the distance I could glide in relation to the ground.
