Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> excursion off runway after nose wheel collapse; plane flipped over and sustained substantial damage to fuselage, tail and wings		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. uneventful flight from KPUB. very busy that late morning at KAPA with prior jet and cessna 210 issue landing at same time on preferred rwy 35R. tower split frequencies and asked light traffic to divert to rwy 28 to ease congestion at last minute. asked to report 4 miles from airport and enter left base for rwy 28; there was variable 10 kt crosswind. was very conscious of approach speed and had stabilized approach on final; approach at 80 kts and 10 degrees flaps; then down to 75 kts and 20 degrees flaps on short final. new plane to me; very nose heavy with heavy O-360 lycoming engine in front for relatively small kitbuilt plane. i was solo occupant in tandem seating plane. flying front seat. right handed stick/rudder controls. left handed throttle/prop/mixture levers over on left console. i realized on early flare that i was high and descending a little fast/heavy and reached to left to add power and smooth out flare. I think i reached over and pushed first level full forward, which is red knob mixture control. this retarded power as "full rich" is not full power at 5700 feet msl (on runup mixture setting for full power is half lever forward for "best power"; ie you must lean for full power at KAPA's altitude). plane landed hard on main wheels of tricycle gear and then bounced sev feet up; on coming back down from initial bounce, the nosewheel collapsed; possibly from faulty castoring/sideways deflection; which is something i was told about when buying the plane. All the tricycle gear van's rv's have had issues with collapsing nosewheels and poor engine/prop clearance from ground. there was service bulletin ten yrs ago that asked for nosegear strut upgrade and i was told by original owner that he had this done. i was also told about, and observed, some nosewheel "shimmy" (side to side wobble) with landing rollout and was told the best solution was to keep tire psi at 36 on all wheels and possibly upgrade to "Antisplat" nosegear struts, as this issue has plagued the RV's alpha/ tricycle gear series. (e.g. Anti Splat Aero LLC website for more details) once nosegear collapsed, then had prop strike and plane skittered off runway (standard two blade metal prop; 72 inches). nosewheel caught in soft wet grass edging and plane flipped over. was trapped in harness for about ten minutes until firecrew help arrived. they jacked up tail of plane and i was able to retract sliding canopy and crawl out; just sustained minor scrapes to arms. roll bar protected neck and head during flip over and no body injury occurred. was not taken to the hospital; released by paramedics. likely plane is totalled due to structural damage and it is not a certified plane. no fire; possible trace fuel leak after flipping over. did have full tanks of fuel (21 gallons in each wing tank).		

RECOMMENDATION (How could this accident/incident have been prevented?)														
Operator/Owner Safety Recommendation was working on familiarity with new airplane. last minute rwy change was not an issue; had to reach down to lower flaps; should have immediately re-established left hand on throttle level for duration of flare to avoid the "wrong lever" issue. nosegear strut and known nose wheel wobble likely contributed to premature nosegear failure and subsequent collapse, rwy excursion/ accident. rollbar did save my life, as plexiglass sliding canopy shattered/broke when flipped over. very thankful for rollbar.														
MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)														
Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No <i>(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)</i> likely castoring nosewheel "shimmied" and went askew/sideways on rollout; leading to easy collapse of nosegear and subsequent prop strike/ loss of control.		Total Time/Cycles On Part <u>735</u> Hours <u>unknown</u> Cycles Time Since This Part Inspected/Overhauled <u>unknown</u> Hours												
FUEL & SERVICES INFORMATION														
Fuel on Board at Last Takeoff <i>(Convert from pounds, as necessary)</i> <u>40</u> Gallons	Fuel Type <table style="width: 100%; border: none;"> <tr> <td>☐ 80/87</td> <td>☐ 115/145</td> <td>☐ Jet B</td> <td>☐ Other, specify _____</td> </tr> <tr> <td>☒ 100 Low Lead</td> <td>☐ Jet A</td> <td>☐ JP8</td> <td></td> </tr> <tr> <td>☐ 100/130</td> <td>☐ Jet A-1</td> <td>☐ Automotive</td> <td></td> </tr> </table>		☐ 80/87	☐ 115/145	☐ Jet B	☐ Other, specify _____	☒ 100 Low Lead	☐ Jet A	☐ JP8		☐ 100/130	☐ Jet A-1	☐ Automotive
