NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was performing a test flight of N6944K prior to getting started for the upcoming season. I had loaded approximately 100 gallons of water in the hopper to check my nozzles, the integrity of the hopper, and to check for leaks in the spray apparatus. On takeoff, I noticed the airplane was nose heavy, and attempted to trim nose-up to counteract it. With the trim as far aft as it could go, it was still uncomfortably nose-heavy. To get a feel for landing, I went to Walnut Ridge Airport, KARG, to perform a series of full-stop landings, while at the same time getting used to how we normally operate when we work off of that airport. When we fly off of KARG, unless the wind is very strong or gusting, we land on runway 13 and depart 31, from the midpoint near where it intersects with runway 18. I performed 3 full-stop landings, with no abnormalities other than having to apply more back pressure than normal on the stick. After the last takeoff, I flew back towards our home strip, partway in slow flight to get a feel for the airplane prior to landing on our strip, and then made some practice spray runs along the east side of the runway. I advised company of the need for a trim adjustment, and prepared to land the airplane. To that end, I flew a wider and longer pattern than normal in order to give myself more time to react if something went wrong on approach. Touchdown was on centerline, tracking straight down the runway with no side load. I had not brought the power back into beta, and the tail started to come back up again. Unsure as to why it was doing that, I added power to initiate a go-around. At that point, the airplane started tracking to the left, and i was unable to keep it on the centerline or become airborne again. The airplane went off the left (west) side of the runway and when the main landing gear went into the mud, the airplane pitched forward until it came to rest inverted. I was able to turn off the master and place the fuel shut-off valve in the off position before exiting the airplane. At the time of the incident, i was aware of my boss's airplane which had departed a few minutes earlier, and another operation's airplane was making passes off the north end of our strip, which i was keeping track of since i was landing to the north, because I estimated the possibility of a go around as fairly likely.
