NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Sparta 8D4 at approx. 8:30 am with a weather briefing via FlyQ and Foreflight of 320 at 10 knots for landing practice. Decided KRQB because had Runway 32 and 27 so I could practice normal and crosswind landings. I was landing on 32 then taxing up to 27 for crosswind departures. After doing this multiple times the crosswind component was not significant to the aircraft. So then started landings and take offs on 27. Landed on 27 and departed on 27. Next time around I landed on 27 but was going to go to the terminal building to use the restroom. Wind out of the North, slipped the landing with Right aileron and Left Rudder. 65 Knot approach speed, 4 notches of flap. Prop In. Upwind wing down. Wheel Landing (Tail wheel Plane). Right Main touched down before the 1000' runway markings. Cut power and left main touched down. Yoke slight forward pressure to hold tail up. On roll out dropped 4 notches of flaps to none. Coasting down runway as speed continued to bleed off as there is no separate Taxiway. Slight braking but varying yoke pressure to keep tail in the air as long as possible as I did not want to change the wing angle of attack. Approaching turn off to terminal, right aileron into the wind I started to lower the tail of the plane slowly. A big gust of wind hit the side of the plane just after the tail wheel touched the ground. Wind lifted Right main tire off the ground and left wing about to hit the ground. As it started and continued to lift, it started to twist to the North. I added full Left Rudder and Full Power (Prop was already pushed in on the approach). At about a 45-60 degree angle the right main touch the ground. Then the plane launched off a 5-6' tall berm on the North side of the runway. Which sent me into the air. With inadequate airspeed stalled and spun the plane around to nose into the ground. After crash. Seat Harness off, Fuel shut off pulled, avionics off, master off, mags off, and out of the plane. Approx. a half hour later in terminal wind was indicated 350 at 15 knots gusting to 22 knots.
