Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front-wheel off. Empennage broken. Propeller damaged. Wings damaged. No damage to cabin and interior. Avionics still operative.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Night flight training for recency. X-winds from the right. First landing nice and smooth, back to taxiway, full stop. Second landing: Well established on approach, flaps 30 degrees down, 68 kts over threshold. While in flare, plane was hit by unexpected wind shear and blown to the left side of the rwy. Pilot tried to bring plane back to centerline, input of the controls were minimal, since in flare (just before landing stall). By moving the plane back from an estimated 40 degrees angle to the centerline, the front-wheel hit the rwy and was blown off. After a bounce upwards the plane came down with the nose, the prop hit the rwy and the plane slid in a 30 degrees angle to the left side of the rwy. Steering impossible, as front wheel off and only sliding on the front strut. When plane came off the rwy the strut drilled into the sand and the plane was flipped over. Pilot suffered no injuries, climbed out through window and called 911, NTSB, FAA.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Wind shear came as a total surprise. Pilot lost directional control.
