Experimental Glastar 98SR -amphibious
April 31, 2017 at about 15:10
Departure point was KCCR
Over Lake Berryessa
2 Pilots on Board
No Injuries
No dangerous materials

Narration:

We arrived over the Lake about 14:30. Yan and I decided to do some low approaches to the water but no landings. Yan did the first two. It looked so good we decided to just skim the step on the water and climb away on the second. Yan preformed it perfectly. Making a race track pattern again, we scanned the area for debris and I preformed the same maneuver. All went very well. We decided to preform one more time. Again we scanned for debris in the water and turned back to perform the same ever so brief skim of the water. I was letting down at less than 100'/min and at 62Knts. I added power to begin the climb away when suddenly the A/C turned right and capsized tail over nose.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It was either fatigue failure of the right pontoon or submerged object that caused the right pontoon to rip open on bottom and fail.

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

I was able to push the Wind Screen up and away. Jan and I were both successful in releasing our seat belts. Neither of us could open the door with Arm/Hands. I turned sideways in the seat and with two legs pushed the door open and at the same time pushed Yan out through his door. I then exited the Cockpit to find Jan already at the surface of water.
