Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right horizontal stabilizer damaged beyond repair.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was attempting to demonstrate a soft field takeoff with a choice of runway 2 with an 8 knot headwind (estimated) and 200 foot trees to clear about one mile off the end, or runway 20 with shorter trees to clear about one mile off of the end. I chose to use runway 2. the top 3 feet of the tallest tree was observed to hit the right wing strut with no observable damage. The aircraft continued to fly as normal, and was flown to its home base at KMFR. After landing, damage was discovered to the right horizontal stabilizer, which will require replacement.

RECOMMENDATION FOR PREVENTING A SIMILAR ACCIDENT OR INCIDENT**Operator/Owner Safety Recommendation**

This accident could have been prevented by:

1. Recognizing that the risk of taking off downwind over lower trees was less than taking off upwind over taller trees. In retrospect, I am wondering if the trees blocked the headwind, making it more difficult to clear them.
2. Not attempting a soft field takeoff demonstration under those conditions (the previous short field takeoff demonstration on runway 20 in no wind conditions had been successful).
3. Shuttling the passengers to KMFR one at a time to lighten the load.
