RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident was caused by fuel exhaustion. To prevent an accident such as this the pilot must always know there is enough fuel in the fuel tanks to safely fly the aircraft. In addition to monitoring the fuel supply by the fuel gauge, the pilot could also visually verify fuel is in the tanks by looking in the tanks and seeing fuel. Another way to have prevented this accident would have been to time the fill-ups of the tank to assure the fuel would not be exhausted, using the fuel burn per hour to time fill-ups.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

It has been my suggestion to our pilots to physically write on the dash or instrument panel of the aircraft, the time that fuel was taken, so that ^{it} is a visual reminder other than just the fuel gauge to indicate when it is needed to take on more fuel. We've been using post-it notes and a pencil, and it has been a safety measure that is a constant reminder of the pilot's fuel situation.

The accident pilot's attention was distracted from his fuel situation by a mal-functioning GPS system. The rough dirt airstrip that he was operating from could have jammed his fuel gauge to cause an erroneous reading, and thereby giving him a false indication of his fuel supply on board the aircraft. To prevent this from happening again, one would choose only to operate from better maintained airstrips to assure a safe flight, and to visually check the level of fuel in the tank to see that it corresponds to the same level on the fuel gauge.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
