Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller bent. Engine mount bent. Damage to firewall. Cowling broken. Rudder and vertical stabilizer damage. Left landing gear bent. Wing struts bent. Left wing tip broken. Windshield broken
Both wings damaged on upper surface from inverted conclusion to accident

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Local weather information obtained from internet sources at approx 07:00 and from AWOS. Departed KEUL at 07:58 for S75. No difficulties en route. Announced intentions and crossed S75 midfield at TPA (3300). Observed windsock demonstrating calm or light wind favoring rwy 13. Announced and entered downwind (GUMP check), base and final for rwy 13. Very stable approach, stable descent and stable speeds (65mph, 40 degrees flaps). Flared at appropriate height with directional control directly down centerline and no drift and no crab. Upon touchdown, the aircraft veered hard to the right. Initial attempt to regain directional control failed and full power applied in attempt to become airborne just before exiting runway surface. However the Left gear dug into the ground and the plane flipped inverted. I turned off the magneto, shut off master and pulled mixture off. Then I released restraints and exited the aircraft. The accident developed very rapidly and lasted only a few seconds.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I am still unable to explain the cause for this accident. While it might be explained by a groundloop event, I felt that the final approach was set up perfectly and there was minimal wind to contribute to loss of control.

I was uninjured in spite of a fairly violent landing. I believe the 4 point restraints were key to this outcome.
