Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing damage, Right landing gear damage, tailwheel and tail damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 4:25 I entered typical left hand pattern for the active runway 35 at Logan. Surface wind were light and variable at less than 3 kts. Pattern and airspeed control was normal for the aircraft being flown. On final approach I held 55 MPH for a wheel landing added a touch of throttle to arrest sink rate just before touchdown, airspeed bled off to approx 50 MPH stall warning chirped as main landing gear touched down. A little forward pressure was added to the stick to hold the gear on the runway and the plane initially began rolling out straight down the middle of the runway. As the plane slowed it began drifting to the right, left rudder was added but the plane continued drifting right, additional left rudder was applied and the plane turned left quickly beginning a ground loop which could not be stopped. As the plane turned 180 degrees from the landing direction the right wheel broke off of the gear leg, the right wing made contact with the ground and the tail and tailwheel were damaged. The plane came to rest on the runway. The pilot stayed with the plane using the radio warning other aircraft not to use runway 35. The passenger walked to the FBO to get assistance getting the aircraft off the runway. There were no injuries to either the pilot or passenger. The aircraft was removed from the runway within 30 minutes.

The lack of rudder response was the result of having my feet too high on the rudder pedal causing the toe brakes to inadvertently be engaged during landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Must ensure that feet are properly positioned on the rudder pedals so brakes are not engaged during landing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
