Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front landing gear, propeller strike, possible firewall. Extent of damage in the front not available yet. Cockpit and fuselage in good condition.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Plane positioned at Healdsburg Airport (HES) Pre flight the plane and obtain weather report using NOAA Aviation Weather site. Departed HES on runway 13, contacted Oakland Center 5 miles west off Santa Rosa Airport. Obtained Code and flight following VFR at 3,500 feet to San Carlos Airport (SQL) via Sausalito (SAU) VOR. Contacted Norcal 10 miles North of SAU got Bravo Airspace Clearance = <2,000', west of Bay Shore Freeway. Immediately obtained SQL ATIS. When flying over San Francisco Park I was handled to SFO tower and immediately asked to follow eastbound heading, then asked to follow 020 degrees heading and maintain = < 1,500', reached candle stick park and asked to follow Bay Shore Freeway southbound, there was windy and gusty conditions during the SFO - SQL transition. 2 Miles SW of SFO I was handled to SQL Tower with my current Code, cleared to join right base for 30 via mid field = > 1,200', there was another plane on pattern turning downwind and got cleared number 1. Slow down the plane to 110 knots, deployed 20 degrees flaps and turn base for a short final for RW 30, approach speed was 70 knots, cross winds were gusting decided to keep power up, dropped left wing and aim for touch down pilot side gear first, pilot side wheel briefly touched down, during the flare I guess a wind gust pushed the plane down and caught me unaware and the front gear touched down and heard a snapping pooping bang under my feet, the plane bounced up, because of the initial noise at touch down and the concern of a broken front gear strut cylinder, I decided to proceed with the landing and not go around, bounced once again a strong metal grinding noise, and plane skid to rest on the mid grass section by taxiway C. Shut power and fuel off, exited the plane and waited for Airport assistance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I will perform 20 hour re-training on cross wind and other conditions with CFI to avoid over confidence. I have over 500 landings at this airport and perform good landings on more challenging conditions, San Carlos is infamous for cross wind. I will leave up to the quote make every landing the best one.
