Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft – Landing gear collapse. Impact damage to wings, fuselage, spinner and prop. Engine mounts and cowling bent or broken.

Property – 6+/- pear trees damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed approximately 4:30 pm from 4S2, no services, intended return to 4S2.

Took over operation from previous pilot around 1:30pm. We had a brief conversation about his shift and condition of aircraft. He had done 10 tows and fueled that morning. Fuel indicator showed 2/3 full on walk around.

On the tenth flight, I noted a low fuel indication in flight just prior to glider release. Timer read 2 hours +/- flight time. I estimated that more than half hour fuel remaining. Did not take previous operation into account at that time. Made note to fuel upon landing.

The glider released at 3650' msl. I descended southbound west of the airport. Descending through 2500' msl, about to join a 2 mile 45 degree entry for runway 25, the engine lost power. Emergency landing at airport looked like the best plan of action. The quartering headwind pushed the flightpath further east. Considered midfield approach, but hangers and trees would make approach difficult considering altitude remaining. The horse pasture at the corner of Orchard Rd. and Winston Rd. became the next best option. Struck trees 50 yards short of pasture.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- Improve Standard Operating Procedures. Full tank at beginning of operation and at handoffs.
- Rethink emphasis on minimizing starts.
- Ops logbook in aircraft to report hours, operations and squawks.
- Placard Before Takeoff Checklist. Emphasize "Check Fuel Level" to aid transition from panel mount indicator and assist pilot when operations become very busy.
- Ground ops could periodically call for a fuel check
- Improve method of determining fuel level. Possibly a dipstick.
