Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right front float strut crack and aft portion of belly between tail and rear door was dented inward from water compression causing bent bulkhead's.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 24, 2017 I had a scheduled flight from Juneau to Elfin Cove to Pelican at 8:00am. I had seven passengers on board, the total weight was 8,220 lbs and the index was -8. At approximately 8:30am I flew over Elfin Cove and determined that it was suitable for landing. The conditions were a West N/W wind at 15 kts and a swell that appeared to be about 2' with chop on top at the entrance of the Cove. I misread the size of the swell. My approach and touchdown were as planned, but immediately after touchdown the aircraft jumped a swell, resulting in a tail low hard landing. There were no passenger injury's nor injury to myself. After inspection at the Elfin Cove dock there was no damage found, I then preceded to Pelican with four passengers. At the Pelican dock I noticed a small trace of hydraulic fluid at a couple fittings, after further inspection I found no damage or safety concerns. I then returned to Juneau with five passengers. Upon landing I had maintenance inspect the aircraft at which time they found substantial damage to the aft belly section near the tail and a crack in the front right float strut.

Miguel Heras

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Operations in the coastal area's with winds out of the west should proceed with extreme caution, utilizing the company and the pilot's best conservative judgment. On days where the weather is of concern, the pilot will consult with their supervisor to decide the best course of action for these trips.
