Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent Prop, Engine displaced, L/H & R/H Wing Damage, Fuselage Damage, Horizontal and Vertical Tail Damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Prior to departure from PAEN at 15:36 Alaska time, I fueled and had a total of 60 gallons on board and checked the oil which was at 11 quarts for the flight to Chinitna Bay. Passengers arrived and we did a weight and balance to distribute the weight appropriately between the two planes we were taking. We were under gross weight and well within the CG envelope. I was piloting N207RB, the trail aircraft, and the flight went well with little turbulence. I flew over "Red Glacier" and Hickerson Lake for the passengers to have some flight-seeing opportunities. Upon descending over Hickerson Lake for Chinitna Bay, we experienced light to moderate turbulence (for a Cessna 207). This lasted until the incident on the beach. I was talking to the pilot in the lead aircraft who had just landed ahead of me at Chinitna Bay, and he said I should not land on the "short beach" because of sinkers on short final. Winds were significant with gusty quartering headwind down-sloping off the terrain from my left. I turned final and was in landing configuration but kept my speed up until touchdown because of the gusty conditions. I passed over the short beach and landing just beyond the point of the start of the "long beach." Touchdown was completely in control. I added left aileron to counteract the winds from the left and help with the slope of the beach to the right. I also pulled back on elevator to protect the nose gear as is always my practice. At this point I felt a significant push to the right toward the water and was concerned with going into the water if this continued. At this point I added full power and went to 10 degrees flaps for a go-around. The nose wheel caught and felt like it broke off, allowing the prop to strike the beach for 20'-30'. We continued sliding on the lower bowl (cowling) until the propeller spinner caught in the sand, at which point the energy still left in the moving airplane in the direction we were traveling caused the tail to kick over. We stopped, and the plane came to rest on its back. After we stopped, I immediately turned off the master switch to prevent fire. I called to my four passengers, and all said they were okay. The passenger next to me could get his door open immediately, and he exited first after releasing his seatbelt. After we all got out, I yelled to run away from the plane because of the leaking avgas. I attended to my passengers to make sure they were indeed not injured. At this time help began to arrive from people already on the ground. Many pictures were taken of the plane as is, and I made sure it was not touched or disturbed until pictures were taken to preserve any good information concerning the accident.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Based on the pictures, video, and description of the Accident, we feel that there was no preventative measures that would have effected the outcome of this Accident. After consultation with company Director of Safety, we implemented a change to our SMS program Risk Assessment Worksheet, to include Risk mitigation measures for wind direction and speed for Chinitna Bay Beach landings. Based on our assessment, the pilot acted appropriately given the conditions and feel of his landing and decision to perform a go around prior to the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Upon review of the aircraft and accident site, it is unknown if there was a malfunction or failure of an aircraft mechanical component. Prior to and during the accident, the pilot noted that there were no abnormalities to normal operation.

**Total Time/Cycles

FUEL & SERVICES INFORMATION**Fuel on Board at Last Takeoff**

(Convert from pounds, as necessary)

60 _____ Gallons

Fuel Type

☐ 80/87 ☐ 115/145 ☐ Jet B ☐ Other, specify _____
☒ 100 Low Lead ☐ Jet A ☐ JP8
☐ 100/130 ☐ Jet A-1 ☐ Automotive

Other Services, if Any, Prior to Departure

None

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

Passenger front door, all 5 occupants went out the same door.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)

Aircraft Registration Number

Manufacturer: _____

Model: _____

Damage to Other Aircraft

☐ Destroyed ☐ Minor
☐ Substantial ☐ None

Registered Owner of Other Aircraft

Name: _____

City: _____

State: _____ ZIP: _____

Country: _____

Pilot of Other Aircraft

Name: _____

City: _____

State: _____ ZIP: _____

Country: _____

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
