Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent landing gear (both). Bent fuselage structure. Damaged wing tip. Damaged aileron. Bent horizontal stabilizer. Engine prop strike. Bent propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This accident occurred following an attempted aborted takeoff.

On 20 June 2017, at 17:00 local time (Mountain Standard Time) pilot elected to embark on a local-area flight from the Sandia Airpark airport (1N1), New Mexico. Temperature was 98 degrees F (density altitude 10,000 feet), sky clear, visibility greater than 10 miles, winds from 300 at 8. Runway length was 5200'. Pilot initiated his takeoff roll on runway 09, and accelerated normally.

At approx 8 seconds into the takeoff roll (approx 1000 feet into the take off roll), just as the aircraft was approaching flying speed, the aircraft suddenly and unexpectedly lifted off the runway in a steep angle of attack. (Microburst is suspected.) The pilot instantly recognized the situation as critical, and immediately reduced power to idle in an attempt to land the aircraft. With still insufficient flying speed attained, the aircraft settled back onto the runway but landed hard. Aircraft lost directional control and slid off to the side of the runway, coming to rest - still on its landing gear - in the dirt alongside the runway. No injuries were sustained by the pilot.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident was 100 percent pilot error.

No problems or controllability issues of any sort are suspected with the aircraft itself.

Pilot responded incorrectly to a sudden liftoff before adequate flying speed was attained during take off roll, and allowed the aircraft to settle hard onto the runway, resulting in loss of directional control and subsequent damage to the aircraft.

Additional pilot training in ground handling operations during high density-altitude and hot/gusty conditions may have helped.
