NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Attached is a time line of communications with the tower of all aircraft in this time frame.

After clearance to land, proceeded to runway 11, touched down approximately 50' east of the runway numbers, made 3-point landing, rolled approximately 250-300' was slowing down straight down runway at about 30-35mph when my right wing lifted about 4-5' and pivoted on the left landing gear about a 45 degree angle to the runway headed for a row of approach lights, as you can see in the photo. When the plane settled back to the ground I was headed directly for row of the approach lights so I applied wheel brakes and the plane broke over center and tipped onto its nose, then rolled over the right wing and landed on its top. I was wearing a 3-point seat belt system with shoulder harness and had no injuries. I turned off fuel and master electrical switch and escaped cabin through rear door of plane. Just as I exited the plane another plane came overhead about 75' above me on the same runway.

On the morning of Saturday, June 24th, there was a lot of thermals (dust devils) on the field. Considering all known facts and factors, probable cause mini tornado (dust devil).

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Runway 11, the first 900ft is a downhill portion of the runway and known for turbulence over the runway, and after my experience I would recommend that small aircraft not land before intersection of 25 and 7. This runway is also adjacent to National Guard Chinook Helicopter wake turbulence production.
