NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

This is July 12, 2017, I John Toth want to give my account of what happened 10 days ago regarding the airplane crash of my AG5B TIGER N321MW. This occurred on a Sunday night (7/2/2017) at about 5 p.m. I had spent about an hour maybe a little over an hour going up and down the Suisun Bay with Travis flight following doing maneuvers, slow flight, power off and power on stalls at 3,500 feet, as my checkride was just 4 days away. As Rio Vista airport was on the first leg of my designated Flight Plan by the DPE, I wanted to make sure I practiced in the area of Rio Vista Airport, under which I have an endorsement. My first goal was to pick the correct runway for best winds and to avoid traffic incursion. When I approached Rio Vista airport I discontinued flight following with Travis as I reported that I had Rio Vista Airport in sight. I approached Rio Vista from the southwest direction staying about 3 miles West of the field and heading in a northern direction at approximately 2,500 feet as I expected to position my approach for RW 25 or RW 33 as both required right pattern approaches. I contacted AWOS and I recall listening to the weather report while still staying west of the field heading north as I had done before with one of my instructors not too long ago. I had landed numerous times over the years on RW 25, and several times on RW 33, and only a few times on RW 15. I recalled that over the years even the locals would opt to land on RW 25 even when the AWOS report favored RW 33. In those cases it was best to follow the 2 to 3 planes already in the pattern then to try to switch RWs on them as the winds were also usually light at those times. So when I heard from AWOS that the winds were 120 at 12, I wanted to do it right and by the book. I was also aware that the winds around Rio Vista have always been a bit unpredictable. Having reconfirmed that the winds were 120 at 12, I radioed my intentions to circle the airport from the North to East then southerly then northerly to enter the left pattern altitude on the downwind at 45 degrees to RW 15. I completed my downwind and base well and maintained excellent directional control over the centerline on final but was a bit high so I executed a go around. As I climbed out I noticed the position of all the windmills not just some, favored runway 25. And so I radioed my intentions to fly over the field at 1800 feet to inspect the sock to reaffirm the direction of the wind as I did so I found that the windsock did indeed as did the flags on the field confirm that the wind was going almost directly down RW 15. I felt more confident that RW 15 would be the designated RW to land if this were my check ride. So I wished to try it. I radioed my intentions as before and entered the left pattern as before and kept excellent directional control without difficulty down the runway and just when I was going to perform a go around I was about 5 to 10 feet of Altitude, I engaged full power and slowly brought up the flaps then in a nanosecond I was vertical facing east. I had expected some crosswind from direction 120 (left to right) and set up for that with yoke rotated left with my go around, when in a microsecond a windshear from the west caused me to go vertical facing east. Immediately banking full deflection to the right to stoppage and breaking point while applying full right rudder saved me. Had I, 5 more feet of altitude I would have cleared the ground completely. But it did prevent me from rolling further left and prevented me from flipping over and crushing my canopy. In this fight for life while the windshear violently blew me eastwardly forced my left-wing to eventually strike the ground. Steady firm resistance on my yoke to the right with right rudder pressure kept me from flipping over and the remaining forces vectored to the right causing me and my plane to slide thorough the grassy field a hundred yards before stopping. Once my left wing struck the ground I fell into my right seat and stayed there till my plane stopped moving 100 yards away. I quickly turned the mixture to lean, the fuel selector to the off position, the ignition switch off, and the master switch off and got out. A witness Steve Scott drove over to see if I was ok and voiced that he witnessed the sudden wind change.

He called the authorities and I attempted to call Travis and Concord towers. The police were there within 10 to 20 minutes. The fire fighters soon followed. Some oil was leaking from the engine and retardant was placed all around the engine area. I certainly appreciated the quick response, and everybody was nice and helpful. I was able to speak to the FAA via the police officer's phone. Howard from the FAA and I think another gentleman possibly Eric from the NTSB. I was not injured in any way. And the fire fighter personnel left not too much later and the police remained on the scene for over an hour.
