Touch and go,pattern practice,at kryn.Cleared to land on 24R.Normal stabilized approach for full stop terminating landing.Wind 250@10 mph.Immediatly after main wheels touched down,airplane pitched up by dust devil and yawed left to right.Full throttle was applied,and attempted to establish level flight and increse air speed.I was unable to regain level flight and right wing tip scraped on runway,plane then yawed left when left wing tip scraped runway.Upon contact with front gear, tire blew out and wheel broke.Airplane thed slid approximetly 60 to 70 feet to left side of runway 24R.After coming to a relatively smooth stop I notified the tower i was not injured,turned off master switch and exited to thr resr of the plane.

This happend over hard surface so there was no visable debris in the air to see on approach.I believe that more experiance with and without instructor is the answer
