Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft experienced dynamic rollover on the right side-rotor blade tip struck and damaged a fuel cabinet (no fuel spill)

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The last leg of this personal/pleasure flight originated from KBLM and continued to N43 for refueling. Winds at N43 were relatively calm and I made an approach to RWY 18. The approach was to the numbers, I set down on the runway, lifted off and performed 4-90degree peddle turns to the right, proceeded to midfield and performed 4-90degree peddle turns to the left. I then proceeded to the fueling area set down and shut down the engine. The airport was closed that day as I refueled my ship. I did a preflight and started up to return to my final destination 4PA0. I performed the run-up mag check, sprag clutch check and low rotor rpm horn. All gages in the green- ready to lift off. I proceeded to lift off and the tail rotor chip light illuminated and distracted me for a moment as this warning light had never illuminated in flight before. The ship was full fuel and inherently tail heavy and I drifted right a few feet and the right rear skid contacted the surface and caused a dynamic rollover to the right. I exited the aircraft and immediately notified the Lehigh Valley Airport authorities (owner/operator of N43). They responded and the ship was uprighted and moved to a hangar.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Eliminate distractions in critical phases of flight.
