Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

TAIL WAS CUT OFF AND HARD LANDING TO THE AIRFRAME

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On June 30, 2017, I was applying liquid chemical to corn in a Bell 206 BIII. I was spraying along a power line that intersected another power line at 45 degrees. When I pulled up to turn my right spray boom contacted the intersecting wire. The fuselage pitched forward and the main rotor blade cut the tail boom off just aft of the horizontal stabilizer. At about the same moment the wire broke. The aircraft began spinning rapidly. After 1 to 2 rotations I closed the throttle which stopped the rotation. I cushioned the touchdown with the remaining collective pitch and the aircraft came to rest level in a corn field. I completed the shutdown procedure and exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

We are discussing the possibility of spraying the edges of the field out first so you will have an additional indication on our gps screen that something is in front of us. We have also elected to not spray so close to the edges in an effort to minimize risk near other objects.
