Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings, both ailerons both flaps Horz. stab, elevator propeller, nose gear both main gear and canopy

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This aircraft was in the flight test phase.

I had three previous flights with this aircraft. The take off roll was a problem, it always pulled hard to the left. this is a steerable nose wheel airplane. I had to use an extreme amount of right pedal to keep the airplane on the runway. Once airborne, the aircraft flew very well. The aircraft needed very little rudder input to make coordinated turns. Landings were very controllable.

On Wed. July 12@ 7:30am MDT I was preparing for the forth flight at E98 on runway 36. The aircraft gross weight was 1350 lbs The C.G. was at 13.5aft (8.7-15.6 is acceptable). My takeoff plan was to accelerate to about 50 mph while holding the nose down, the raise the nose only enough to release the nose wheel steering engagement, then continue to liftoff using rudder control.

The aircraft drifted to the left even though I had full right rudder. The aircraft lifted off but I was about a wing span off the west side of the runway.

I held the aircraft in ground effect and started to maneuver back over the runway. I didn't want to try to climb without getting back over the runway because there is a utility pole about 50 feet west of the runway, approximately 500feet ahead of my position.

At this time the left wing caught a clump of tall weeds .It spun the aircraft 180 degrees to the left, over the drainage ditch. The aircraft entered the drainage backwards. It traveled about 60 feet backwards, and came to rest upright.

RECOMMENDATION (How could this accident/incident have been prevented?)			
Operator/Owner Safety Recommendation The aircraft apparently needed more rudder authority.			
MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
