Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wing tips were scraped, and some ribs in the right wing tip were damaged from the contact with the ground. Due to wing spars being wood and also old, the inspecting A&P wants to replace without specific inspection of the spars for actual damage, which is the reason the plane is being written off (these spars are very expensive to replace, and the plane isn't worth a lot) The right strut and the mounting area bent inwards a bit.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of June 15th, 2017, I flew my weekly work commute from Carlsbad (KCRQ) to Van Nuys (KVNY). On this morning I chose to take a 100hp conventional gear Citabria from the local flying club I'm a member of, tail number N2537F. I received my tail wheel endorsement about a month prior after 11.4 hours of quality and thorough instruction, and had practiced pattern work in the same plane three times since, most recently ten days before this trip. I had 14.9 hours of tail wheel experience at the time of the flight (out of 600+ hours total time). I felt confident in my skills, and didn't expect to have any problem.

The flight up to Van Nuys was very long, due to the slow climb and cruise speed of the 100hp Citabria. By the time I had reached Van Nuys, I had flown for almost two hours in strong sun and high heat. Entering the traffic pattern was uneventful, and my first landing attempt in a three point attitude was smooth and gentle. On rollout however, the plane turned left and right as tail wheel planes do, and my corrections were slow, so I went around for another attempt. Now however, I was realizing that I might be "off my game" and felt increased concern for getting the plane landed properly.

On my second attempt, I once again landed very gently in a three point attitude, and started rolling out. The plane pulled right, and I corrected with rudder, and then it started to pull to the left with the left wing raising up a bit, all expected, and situations I had both been trained for and dealt with before. However, my rudder input failed to stop the plane from continuing to turn to the left.

The ground loop happened very suddenly. I did a 180-200 degree turn, and the inertia of the plane caused one wing to tip and hit the pavement. The engine stalled. I sat stunned for about 30-40 seconds as I recall, thinking about my misfortune and collecting myself. KVNY tower then called to see if I could taxi off the runway as a security vehicle pulled up towards me. I was able to restart the engine and taxi off the runway without further complications, and pulled into my parking spot. I saw a Gulfstream take off from the same runway seconds later, which gave me some relief that the delay to the airport operations was minimal.

Upon inspection, the wing tips of the plane were damaged by the ground loop, and the right strut seems to have taken some damage from the side load. The rest of the plane looked undamaged.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pilot is undergoing further extensive tail wheel training. So far, no obvious deficiency in directional control of a tailwheel aircraft has been found.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
