Nose wheel damage, other damage being assessed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Original departure KRDD, fuel stop in KSGU. I departed KSGU around 1215, with no passengers on board. Upon arrival to KABQ there were thunder cells in the vicinity and winds 12, gusting 17, out of 120 degrees. I landed on runway 12 with the wind mostly straight down the runway. I touched down normally on the main tires but the gusty wind caused the plane to float back into the air. I touched down again and it floated again in a porpoising type motion. This happened 2 or 3 times. The subsequent touch downs were likely flat or nose heavy due to the damage found. At this point I elected to make a go-around as I have been trained. The second landing was normal as was the initial roll-out. Halfway through the roll-out I detected a shimmy in the nose wheel. I continued to roll down the runway and was instructed to turn right to the taxi-way. However, the plane came to a slow stop on the runway near the entrance to the taxi-way and I was unable to move forward. I called the tower, informed them that I could not move, and shut down the engine. I got out of the plane and saw that the nose tire was flat, and a piece was missing from the wheel rim. I called the tower requested a tow, and permission to go off the radio to address the situation. I then had the plane towed to a maintenance facility, and began contacting the appropriate authorities.
