Right wing's underside was scraped, Bottom of rudder and adjacent bottom of empanage was also scraped. Rudder Hinges broke during incident. Exhaust pipe was scrapped a little. No damage to engine or propellor (propellor stopped horizontally prior to end of event)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                        |

| I climbed into the aircraft with, Lancair and this particular aircraft, experienced pilot to do a pre-purchase flight. We taxied, uneventfully, to end of runway, did run-up checks and pre-takeoff check, then received clearance to takeoff by control tower. Upon increasing power, "co-pilot" instructed me to anticipate needing right rudder due to increasing power. Therefore, right rudder was applied accordingly. Upon reaching full application of power and increasing airspeed more rudder was applied to maintain centerline. Shortly afterwards, aircraft increased "pull" to left of runway and verbal communication was shared between both of us that we both were applying right rudder and I simultaneous aileron, but no changes in directional control was noticed. At this time I pulled mixture to cut engine power due to belief aircraft was going to leave the left side of the runway. Brakes were applied but seemed to not affect forward or horizontal movement of aircraft. At this point I applied varying back and side pressure on control stick to keep aircraft in "prefered" state to mitigate damage to aircraft, although I could not affect the directional control of the aircraft and was at the mercy of the plane's "wants". Once amongst the grass on the left side of the runway, I heard a "pop" (believed to be the left gear making this noise). After the sound of this noise, the plane then changed horizontal direction to the right, which brought us back upon the runway and into the right side grass of the runway. At this moment the aircraft stopped at its resting point. I notified ATC using the aircraft radios that an accident just occurred, our location, and that each of us was uninjured and exiting the aircraft. |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                        |

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

I believe there was a "mechanical" failure causing aircraft to not respond to inputs to right rudder, right brake, and right aileron. My suspicion is that either the left brake or bearings either siezed or caused enough friction to overcome the control inputs.

**MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Being that I am not the owner of the aircraft, I am not sure of the name or manufacturer of the landing gear assembly. Although, I believe there was a mechanical failure in the left brake or wheel assembly. This belief is due to my experience in different higher performance aircraft, and that once the "pop" noise on left side of runway (bordering grass and where left gear was found) the aircraft responded to my control inputs attempting to bring aircraft to the right therefore bringing us back across the runway and to our resting point in the "right side" grass.

**ADDITIONAL INFORMATION (Please type or print in ink)**

Use this space if additional space is needed for any answers.

This attempted flight was to give me a flight in the aircraft accompanied by make and model experienced pilot, prior to my purchase of the aircraft. Therefore, I do not have access to all information requested above but will help facilitate in gathering this information to my best efforts.
