Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Floats detached upon impact. Right wing bent at wing strut. Left wing tip bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure 6 mile Eyak Lake 4:45 am on July 23, 2017.

Normal take off East into wind.

Left cross wind turn gaining elevation.

Retracted flaps.

Turned on to down wind at 750 ft.

At completion of turn strong down draft pushed tail of plane down and away to left sinking plane rapidly towards lake.

Pilot was able to correct with left rudder and straighten plane just prior to right float tip contacting water.

Plane flipped onto nose, primarily on the right side.

Right wing sank.

Nose settled to bottom. Plane submerged to chest of pilot.

Pilot was unable to exit plane out right door due to float blocking exit.

Pilot exited left door. Climbed onto wing strut.

Another plane was taxiing and retrieved pilot just as pilot received a call from Juneau as the ELT had gone off.

Pilot called friend who picked up pilot.

Pilot and friend attached buoys and floated plane so plane could be towed to accessible crane position near city strip.

Plane towed to strip.

Crane picked plane up and placed on trailer.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Perhaps if I had gained another 100 ft of elevation I could have fully corrected prior to hitting the lake. The plane must have been in the center of the down draft as it did not let go as they often do.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
