NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Sunday July 23rd, 2017 was a normal morning at the private airstrip 4MD1. The Aerial Application business began at dawn and employees for the banner business (pilots and ground crew) arrived to work at 8am. Both businesses are run out of our private 3,000ft grass strip in Berlin. The first job of the banner ground crew is to grab the list for the day out of the office of the banners that are to be flown and the handheld radio with our frequency dialed in. Then using ATV's and wagons, they place the logos and banners that are to fly that day on the wagons and drive them out to the banner field which is parallel to the runway. Each ground crew member is trained from their first day to never cross the runway without looking both ways for there is always the possibility of one of the Ag planes or banner planes taking off and/or landing. Everything went as routine. The ground crew started setting up the banners out in the field and the banner pilots got their planes out and started their daily morning preflight. At this time it was found that one of the nozzles on the Ag Cat I was flying had a small leak. Therefore to try to fix the problem I would work on the nozzle then proceeded to take off and fly over our corn field next to the banner field and the head of the ground crew (Drew) would watch and tell me over the radio if the nozzle was still leaking. He indicated that it was still leaking and therefore I would land and fix the nozzle again and repeat the process. This process of checking the nozzle by air occurred 3 more times. On the next take off and pass over the field Drew radioed to me that the nozzle was not leaking and as before I came in to land. While landing, Drew was driving the ATV in the banner field (to the right of the runway I was landing on) pulling up lead ropes for the day from the back of the field. As he came to the end of the banner field he dropped the ropes as normal but instead of turning right toward the wagons like usual he did not turn his head to check the runway and proceeded to turn left directly into the runway in front of me. Immediately I veered right and he sped up thus causing the ATV and Drew to miss the propeller and engine and hit the wing. Drew was thrown off of the ATV and launched out of the way of the airplane avoiding any bodily damage from the plane. I kept my eye on Drew the entire time the plane was coming to a stop and immediately jumped out ran to him where the only visible cuts/ rash were on his right leg and foot. The other ground crew members immediately brought the other ATV and we loaded him on the back. I then drove him up to the hangar where I loaded him in the truck and drove directly to the hospital within 6-8 minutes of the incident occurring.

RECOMMENDATION (How could this accident/incident have been prevented?)		
Operator/Owner Safety Recommendation <i>Groundcrew member should have ^{visibly} checked the runway before crossing it as he was trained to do.</i>
