Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right fiberglass wingtip lost. Right wing spar and flaperon bent up 5 degrees at strut. Left float disconnected from underside of aircraft and pushed up under right float. Struts destroyed. Both floats had multiple holes punched from strut pieces. Several dents in both floats. Fuselage underside fabric has holes from struts contacting it. Holes in fabric cut with knife in left wing, back of fuselage and elevator to reduce water damage when lifting plane out of water. Water damage to instruments. Possible water damage to engine.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KSZT at 0900 with initial destination of Hill's Resort on Priest Lake with a water landing there. Departed Hill's Resort at approximately 1030 from water with a destination of KSZT. Flew south just east of the town of Priest River to follow the Pend O'reille River back to KSZT. Decided to land in river about 4 miles SE of the town of Priest River at a location known as Thama. Set up normal approach to land or final approach at 60 - 61 mph on an approximate heading of 135 degrees in the approximate middle of the river. The river is 200 to 300 feet wide at that point. Descended at normal descent rate, flared and touched down on the water. Immediately upon touchdown, the tail came up to the right and the plane veered left. I tried correcting this by applying hard left aileron, but as I did so, the right wingtip contacted the water and spun us. The aircraft came to rest in the water on a heading of about 80 degrees. The majority of the fuselage came to rest above water with both floats on the right side up against the right strut and the left wingtip being submerged approximately 1 foot.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Circle the area once similar to landing at a backcountry strip to check and verify the wind and runway conditions prior to landing.
