Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent right main landing gear.

Bent tail wheel.

Fuselage bent in area of tail wheel.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This incident happened on Saturday, July 22, at about 10:30 a.m. at the Atkinson, Kansas, airport. As I approached the landing, AWAS was reporting winds from 270 at 10 knots, which I thought would favor runway 34. The density altitude was 4,000' plus, which means that my ground speed was higher than my usual 90 mph final approach speed. I didn't realize that runway 34 was a downhill runway and that it was very narrow, which means that when turning final in the Christen Eagle, I cannot see anything of the runway and am feeling for the runway. It turned out that there was a very gusty direct crosswind, which blew me to the left side. I corrected to get back on the runway and then was going off the right side and over-corrected and ground looped to the left. The engine and propeller were not damaged and the engine was still idling when I came to a stop. My passenger and I were not injured in any way and climbed out of the plane after I shut down the engine.

An agricultural crop duster pilot, who landed just before I did, said that he was having to use full rudder to stay on the runway due to the crosswind.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Do not land on narrow, downhill airstrips with gusty winds on a hot day.
