Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right Landing Gear Possibly bent, Right Stabilizer skin crumpled, Right Elevator skin bent, Right fuselage crumpled between vertical stabilizer and rear seat.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On July 29, 2017 I was in the back seat of N-72BD a Have the pilot in tC305A (L-19) belonging to Dr. Rob Parrish. We had departed at about 11:15 from his farm runway (TS27) for an orientation flight. After takeoff I took controls of the aircraft. I performed some maneuvers and then proceeded to KELA. I was controlling the aircraft through the traffic pattern and the time was about 1145. The wind was from about 210 at about 8 knots. On final as we approached just before touchdown on the runway a gust from the right caused the aircraft to turn right. We hit the runway and headed off the pavement. At this time Rob said "I've got it". The aircraft hit a runway light and then ground looped in a left turn on the adjoining grass. The aircraft was taxied to the ramp and the damage determined. No one was injured. I was acting as pilot in command but not performing as a certified flight instructor.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Carry more power an airspeed for wind gust condition.
