Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main tire seperated from main gear , left wing damage, tailwheel rolled under aircraft, damage to elevator, and panel crinkling in right side fuselage in front of tail section.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Started the morning at 4WN9 . Using fore flight I gathered my weather data and plottted my course for IN55. I then did a preflight and started the plane to let it warm up. At approximatly 9:30 am or so I was on my way. Just north of KIKK I decided to land , grab a drink and stretch my legs. I came in using runway 4. was setup for a 3 point landing. I came in a little fast and had a bounce, I got the bounce under control and had the main wheels planted in a 2 point stance. I had a little bit of a cross wind, as the tail settled and the airspeed dwindled it felt to me as the rudder was no longer being effective and that I needed to use brakes. As the plane was strating to pull to the right I was starting to get nervous because pushing the rudder pedal wasnt working, I instinctively went for the "heel" brakes that are on my plane at home "46 Aeronca Champ", of course this plane didnt have heel brakes. From the time it took to go from heel brake to toe brake position the plane was already coming around in the ground loop. When the ground loop was over the aircraft was facing more of a 22 direction at the first taxiway on runway 4. I did notice the left main tire come off and the left wing strike the ground as well. I do not feel that the airplane had any mechanical issues.
