Regarding glider LA Schweizer tow hook-up

To Whom it May Concern

I was the crew that attached glider LA to the tow plane using a Schweizer connection. I made sure the tow rope ring was placed in the proper location at the back of the mechanism. I placed the latch over the top beam in the vertical position locking the ring in place. I made sure there was no tension on the release cable. I then used my weight on the rope in both a straight back and back and up direction assuring the tow ring was securely locked in place.
