Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Spinner and prop strike / impact on tree. Engine cowling, spinner, prop, firewall, windshield, nose gear, heavily damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Two passengers and I were en route from KSNA to 0U1 warm springs creek airport in Idaho to camp and watch the eclipse. As we approached the airport we requested a wind and weather PIREP over the CTAF. We were advised by an unknown person on the CTAF to expect winds out of the west. We overflew the field to observe the windsock and observed a light cross wind coming from the west. We made our radio calls and flew a pattern setting up for a landing on runway 2 at 0U1.

Upon crossing the threshold and entering a landing flare we noticed our ground speed increasing dramatically due to a shift in wind. Based on our position at the time I decided to continue with the landing. I set it down and began braking. We were unable to stop in time and overran the end of the runway hitting a tree directly on the spinner of the aircraft. I shut down all fuel and power and we evacuated the aircraft.

After speaking with other pilots who witnessed the landing and accident we determined that the winds had shifted on us during landing and a 20 – 30 knot tail wind had blew us down the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Dont land at moutain grass strips.
Dont fly in the mountains in the afternoon in the summer
Dont fly to airstrips without modern weather reporting
Dont fly into airstrips with large obstacle trees and terrain making go arounds difficult
Dont fly into runways below 4000 ft in length in high density altitude conditions
