Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft received damage on the nose gear, dents on both leading edges of the left and right wing. The left wing had the most damage near the fuel tank. Property damage consisted of 40 yards of fencing that surrounded the airport and the end of runway 17.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The time of the accident was at 14:45 MTN standard time. Prior to take off the weight and balance was under the max gross and within CG limits, normal category. We made our radio call stating we were taxiing from the ramp to the approach end of runway 17 to perform our run up, while doing so we were listening to the AWOS to obtain our current weather at Rexburg Madison County Airport. As I approached runway 17 we held short to go through our runup checklist. Nothing was wrong during the runup. After we made our radio call stating that we will be taking runway 17 for departure to the south. I proceeded to add full power and hold the brakes for a short field take off. After 3-5 seconds I released the brakes and began to roll down the runway. The airplane didn't gain the proper airspeed of 65 KTS until about more than half way down the runway. At that time we flew in ground effect and knew that we would not have enough altitude to clear the trees and homes at the end of the runway. I decided to land back on runway 17 at which we bounced and then landed. Once on the ground I immediately applied brakes and began to skid off to the left side of the runway. From there we skidded in the grass and eventually crashed into the fence 40 yards away from the end of runway 17.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

With the airplanes weight and balance, performance charts all being within the limits of the POH. I would recommend to gain more experience before pushing the limits of the aircraft. In addition being that those numbers were made in 1974 in different conditions that I was in the aircraft might not perform the way it did in 1974.
