Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings and struts bent. Rudder bent. Prop stike with engine stoppage and curled prop blades. Fuselage just aft of firewall showed some deformation.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I was acting as instructor for an individual working towards a tailwheel endorsement. We had several lessons prior to the accident day, totaling approximately 4 hours. On the day of the accident, August 24, 2107 at approximately 0745 PDT< we were working on crosswind takeoffs and landings at the home base for the aircraft. We made one takeoff and landing and then another takeoff with no issues. On the second landing the aircraft touched down and bounced slightly. It touched down again and was lined up with the runway centerline. Very shortly after the second touchdown the aircraft veer sharply to the left. I knew that we would not be able to correct the excursion on the ground due to the narrow runway and rough terrain off to the left siide of the runway. I took control of the aircraft, added full power and appropriate control input to go around. We were not able to achieve takeoff and the main gear went through some low brushy grass then down an embankment. The aircraft nosed over onto its back. My student and I exited the aircraft though the regular door/window opening. We were not injured. The aircraft was substantially damaged. There was no fire.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The narrow runway and rough terrain made directional control extra critical. The student's previous work on wider runways had been acceptable and the decision was made to work out of the aircraft's home base. Additional work on a wider crosswing runway would have helped prevent this accident.
