F.A.A. - NTSB.

On 08-22-17 on landing @ KLEF I was involved in an incident in my airplane N2465G, a C-182 converted to C-180.

The landing itself was great, a nice wheel landing with light and variable winds. When the airspeed got down to the point where I could no longer keep the tail wheel up and it settled to the runway there was an almost violent shimmy or flipping from left to right in tail wheel.

At some point as the airspeed continued to decrease it appeared that the shimmy stopped and the tail wheel locked into a hard left turning position. Very soon after this is when the ground loop occurred. Both the right wing and right side of the elevator were damaged.

In an effort to get it off the runway I had to make a 90° left turn. About 2/3 of the way through that turn it appeared that the tail wheel "unlocked" and I was able to top on to hangar without problem.

it is my understanding that shortly
after this event occurred that one of
the K LBF airport authority personnel
drove to the area on runway 30 to
make sure that I had not left
any debris - etc on the runway and
found a metal clamp on the runway.
My maintenance people - Trege/Schugan
Aur. are saying that this clamp
definitely is not off of my aircraft.
I can not help but wonder if I hit this
clamp with a main gear tire and it
bounced up and somehow got wedged
into my tail wheel control cable.
Not sure that it was even found on runway.

To all concerned -

Thank you for your help and
Thank you for the job you do.
