Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right Gear Leg folded causing the plane to skid on the left wing tip and subsequently on the nose of the plane. The right gear box was seriously damaged, the left wing tip leading edge was damaged and the propeller/spinner and lower cowl was damaged. There was no damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We left Kobuk (PAOB) around 2:45pm after stopping to visit friends there to look for a fishing/hunting camp site on the Noatak river about 60 miles north of Kobuk. We had obtained weather information in Bettles (PABT) at the weather station that promised several days of good weather in the western Brooks Range earlier in the day after an overnight and fuel stop there. In Kobuk we obtained local weather via the Shungnak (PAGH) Awos-3. Upon arrival in the Noatak river area we searched for a suitable landing site on the gravel bars along the river. The best site appeared to be on a gravel bar that crossed a u-shaped bend in the river. Several low passes over the area were made to determine the best landing spot on the approximately three thousand foot long bar. Either end of the gravel bar was covered with small rocks suitable for landing, but the mid section of the gravel bar had fairly large rocks, estimated to be as large as 8" in diameter. I planned to fly across the rocky area and land on the very suitable final third of the gravel bar. Unfortunately, I touched down about 30 feet short in the area with some large rocks. The right wheel struck a rock, perhaps blowing the tire, and subsequently dug into the gravel surface causing the right gear leg to fold back to about a 45 degree angle. The aircraft then slew to the right, throwing the left wing down and damaging the wing tip. The aircraft then rotated up on the nose enough to damage the propeller and spinner and lower cowl. The plane then came to rest on the undamaged left gear and tail wheel. The right gear was folded back far enough that the right wing tip was touching the ground, but with no evident damage to the right wing other than the plastic wing tip. We immediately evacuated the aircraft through the undamaged doors, pilot out the left door and passenger out the right door. I took our Inreach Tracker with us as we exited the aircraft. After ascertaining there was no fire danger, we retrieved our camping and survival gear from the aircraft. Using the Inreach Tracker we were able to text our friends back home in Kenai, AK who were flight following for us. They were able to report our accident to the FAA and assure family that we were not injured. They also arranged for Eric Sieh of Arctic Backcountry Flying Service in Kotzebue to come and pick us up the next day in his Cessna 206. On a positive note when Eric, who has more than 20 years flying in the area, arrived he picked out the same area for landing on the gravel bar as I had the previous day, but he didn't land short as I had done!

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Operating off airport is not new to me as I have flown for more than forty years in Alaska's backcountry. My most serious mistake in this situation was not recognizing the deterioration of my skill in landing on the exact spot often required in off airport landing. My recommendation to novice and experienced pilots alike is to practice, practice, practice until you can consistently land on the selected spot. It is also critical to recognize that experience without true currency can result in an incident//accident that can have grave consequences. In my case, the aircraft had been down for most of a year getting the engine overhauled, and even though I had flown it for 20 hours since, those hours were airport to airport, not requiring the precision needed for off airport operations.
