DAMAGE TO AIRCRAFT AND OTHER PROPERTY		
Aircraft Damage ☐ None ☐ Substantial ☐ Minor ☐ Destroyed ☒ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown
Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Right gear, right wing, right horizontal stabilizer		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. That morning before leaving Kotzebue I had used Weather.gov, Windyty, and the weather cameras provided for the Kotzebue area to get a good idea on what the weather would be along my flight path. the area we fly is very remote so we use many weather services to get the best weather report we can. I departed Kotzebue Airport at 9:30 in the morning my job for the day was to move 2 hunters and their gear to a larger strip called the crossover strip where they could be picked up by a larger air plane for a return flight back to Kotzebue. I had just picked up a hunter and gear from a strip we call candy land at 11:00 which is about 70 miles north north east from Kotzebue Alaska. I was going to drop him off at a near by strip about 15 air miles southwest where he would later be picked up by a larger plane and return to Kotzebue. The strip we were meeting at was called the crossover strip and is located on a large hill where it is possible to land in any position to cater to the wind. At 11:30 I aligned my approach so I would be landing to the north into the wind on an uphill slope. My approach was stabilized and the touchdown was smooth. As I was taxing to the crest of the hill a gust of wind forced the airplane into the air. The air plane was blown to the left, at this time I applied full right aileron and max power. The plane continued to bank to the left until the wind forced the tail in a counter clockwise motion resulting in secondary landing on the right landing gear causing it to fail and fold under the fuselage. As a result of the right landing gear failing the right wing and right horizontal stabilizer came in contact with the ground. The propeller never struck the ground. After shutting the engine down my passenger and I exited the air plane.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After reviewing this incident hundreds of times over in my head and thinking through every action I made that day I have come to a couple conclusions. The first one being landing on a hill with winds blowing at those speeds was a risk that I was not as familiar with as I thought. The second action that I believe I could have taken was avoid landing at that strip all together and fly the plane back to a known Air Port with improved landing surfaces and a weather reporting system. I am positive for the rest of my flying career I will continue to critique and evaluate every move I made that day learning more as my hours and experience progress in my aviation career.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
