Pilot's statement.

Incident at 3s7: I approached from the north and flew parallel to the east side of the runway, observing the windsock and runway for conditions. The winds were calm and the runway clear...there was one other aircraft parked on the west side of the field. I crossed mid field and entered the left pattern for the north runway. Shortly after touch down a cow elk approached at high speed from the left side of the field. It was clear our paths would intersect and that she was going to impact directly on our nose in the next second or two. I went to full throttle and picked the nose up enough to miss her with the fuselage, but did hit her with the prop (throwing a blade) and hitting her with the right wheel. The engine vibrated badly and I pulled the power off and quickly touched down on the main gear. At about the same moment as the second touch-down another elk, a 2 pt. bull, also running at a high speed slammed into my left outboard wing. This caused me to ground loop to the left which buckled my right main gear. We then ground looped to the right and came to rest after skidding for another 100' or so down the runway centerline.

Although I remember the details well, this was a highly dynamic chain of events and every decision was pure instinct. There were high rates of closure and very short distances. Elk have larger brains than a squirrel, but they do not exhibit any better judgment.

My friend and I were miraculously spared any injury and we are grateful for that.

Other facts:

Point of impact with cow was 1070' from the runway threshold.

Point of impact with bull was 1260'.

Resting place of N232TB 1490'.

At 60 mph, the elapsed time from impact with the cow to impact with the bull was 2 seconds. Based on how much I was able to accomplish between hitting the cow and the bull, I think I had less than 2s to react to the cow.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

move the treeline back another 100'. the tree line is 40' from the runway edge. an elk running at 45mph can cover this distance in .6 seconds. the elk came running out of the tree line at full speed for an unknown reason. Neither the elk nor I had a reasonable chance of avoiding this collision due to the time/space constraints placed on us by the proximity of the treeline and runway. Fence the edges of the tree line.
