Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

- 1) Dents to the leading edges of the wings between the ribs.
- 2) A dent one third of the way in on the leading edge of the pilot side horizontal stabilizer. it had a half inch crack in the middle of the dent.
- 3) A shallow dent, one inch wide on the spinner.
- 4) The plastic cover for the navigation light on the copilot side was cracked.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 08/30/2017 I flew a cross-country from Healy River airport to Wasilla, I diverted to because I was low on fuel. I performed a go around because of the gusting winds. I ran out of fuel and performed an emergency landing in the brush straight ahead. This is a description of the events:

On August 30th 2017 at 3:20 Alaska Time I began my flight from Healy River airport with 15 gallons of fuel on board. The airplane was a Cessna 150G.

I was planning a cross-country back from Healy River to Palmer (PAAQ) airport. My flight instructor had signed me off to land in Talkeetna or Wasilla if needed for fuel.

I had to ask another person to drive to the gas station in Healy to fill up two five gallon cans so that I had enough gas.

Before the flight using my POH I determined what fuel burn I would have at cruise (4.6 gph). Online using NOAA's Alaska Aviation Weather Unit (AAWU) I looked up the weather and got the winds aloft forecast for the Talkeetna area. I also looked up the METAR's for Talkeetna and Palmer.

I calculated that for most of my cross-country it would be 12 knots of wind from 210 degrees true.

I pre-calculated that I would burn a total of 8 gallons for my flight time of 1 hour and 40 minutes. My personnel minimum for extra fuel is 1 full hours worth. I calculated a conservative 6 gallons extra for the 1 hour reserve to be on the safe side.

I needed 14 gallons and I had 15 gallons. The total fuel volume is 26.0 with 22.5 usable.

My flight was smooth and slow. Near the beginning of my flight while I was passing Summit (PAST) airport while traveling southwest along the highway, my engine required me to use my carburetor heat. The RPM had dropped and when I pulled my carburetor heat on, within moments, the RPM rose back to my normal cruising RPM of 2400. After that I kept the carburetor heat partially out to prevent a recurrence.

My flight followed the George Parks Highway until I came to Chulitna Pass. From there I flew over the railroad tracks that continue south toward Talkeetna Airport.

Using my paper flight planner and my E6B I timed my points and calculated my fuel burn.

After I had passed Talkeetna and was roughly 20 statute miles north of Wasilla I realized that I was burning a higher amount of fuel per hour than I had planned for.

I realized I must have only about 4.5 gallons total left in my tanks.

At this point I was listening over the radio to the Palmer and the Wasilla ASOS and AWOS-3 weather reports.

I decided to divert to Wasilla, which was only about 10 statute miles out now. I reasoned that I would use 2 gallons getting there and still have two left.

Flying over midfield from the north I heard that Wasilla's winds were 130 at 10 gusting 16 knots. I chose runway 22 which had a left pattern that I was familiar with. Runway 04 uses a right pattern. Because it was almost a direct crosswind I chose the more familiar pattern.

As I came down and started on my final approach, the wind sock showed that I was getting a tailwind.

I corrected for being slightly low by adding some throttle. At first it felt like the throttle stuck, but then it gave too much power. I found myself above the glide path.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1) Realizing that I was traveling slower and using a richer mixture from my carburetor heat I needed to immediately land and get fuel at the nearest airport.

It would have been Talkeetna (PATK) or Willow (2X2)

2) Before making the flight fill both tanks completely full.

Even though it took more time to drive to a gas station to fill up the cans it is worth the wait to have full tanks.

3) Round up on your fuel math, for a safety margin. I used 4.6 gph to calculate, when I could have rounded to 6 gph.

4) Check en route weather to see if the headwind has become stronger and will make the flight time longer.
