NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft had just completed its annual inspection at Above View Jet Center at KSGU. Prior to my planned flight from KSGU to KSLC, I initiated a routine flight at about 9:00 am MDT at KSGU in order to fly a standard pattern to check that systems seemed to be operating properly. This had become a routine for me after an incident many years ago in which I picked up an aircraft that had just had an annual inspection and the first flight went badly. In a test flight for new avionics that had also been installed, the pitch control was not properly responsive, and I landed the aircraft only with extreme difficulty. The cause: the annual inspection A/P had cross-rigged the elevator trim cables. Since then, I have done a brief flight in the pattern upon taking possession of an aircraft just out of annual.

In my effort to accommodate incoming traffic that had just announced it would enter a left downwind to land at KSGU, I shortened my left downwind leg somewhat. I otherwise flew a normal pattern, but neglected to lower the landing gear. I have no recollection of hearing the gear horn, although the personnel who conducted the annual at Above View Jet Center assured me that it was operating properly.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

More carefully review pre-landing check list--particularly under non-routine conditions. Here, an attempt not to delay an incoming aircraft resulted in shorting the downwind leg and, therefore, shortening the time to review the standard pre-landing check list.
