Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

All three rotor blades damaged, tail section almost completely detached from the fuselage, HD camera system damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On September 27, 2017, I was at the Long Beach RO to conduct an annual standardization check ride for S/AP Frank McFall. We met at the Long Beach RO at approximately 8:15, discussed the weather and proceeded to the hangar to conduct the preflight. The preflight was uneventful and we then assisted the FBO ground personnel with moving the helicopter out of the hangar. The aircraft was parked on the North side of the Aeroplex ramp.

Frank and I arrived at the aircraft, completed the walk around and proceeded to strap in. We obtained the current ATIS information and briefed the plan for the flight. S/AP McFall was in the right seat and was the pilot flying for the majority of the flight. At approximately 9:20 am we departed LGB. The VFR departure to the North from LGB was uneventful. Once we were clear of LGB's airspace we requested a frequency change and proceeded to an off field landing site known locally as 17B in order to conduct some off airport landings. Three landings to unprepared surfaces were conducted in this area without incident.

After we completed this portion of the flight I directed S/AP McFall to fly to an airport of his choice to enter the traffic pattern. We entered Fullerton (KFUL) airspace from the Northeast and S/AP McFall executed a steep approach to a no hover landing on runway 24. After landing I directed S/AP McFall to bring the aircraft to a hover and conduct a quick stop maneuver on the same runway. Once the quick stop maneuver was completed I directed S/AP McFall to take off and enter a right downwind.

While proceeding upwind I briefed the scenario that would follow. I briefed that I wanted S/AP McFall to bring the aircraft to a hover out of ground effect on the downwind for runway 24. Once he was in a hover I would actuate the hydraulic test button on the center console. S/AP McFall would then fly the aircraft out of the hover and reestablish directional control with the addition of forward airspeed. Once directional control was restored I would deselect the hydraulic test button on the center console and disable the hydraulic system via the switch on the collective. After that I briefed S/AP McFall to fly to runway 24 to a 3-5 foot low approach only and to keep the forward airspeed up. After reaching the pre briefed low approach altitude I would then direct S/AP McFall to increase his altitude to 10-15 feet where I would re engage the hydraulics. I had performed this exact same scenario twice on the previous day during two other check rides.

This evolution proceeded as planned until we reached the prebriefed low approach altitude of 3-5 feet. As the airspeed began to decrease I mentioned to keep the speed up. Shortly thereafter the nose of the aircraft began to yaw rapidly to the left. I took control of the aircraft attempting to keep us over the runway. The nose of the aircraft then pitched down and I saw the rotor blades impact the runway surface. It was at this time I reached for the power lever and shut the engine down. The rotation slowed immediately and the aircraft came to rest upright just to the right of runway centerline.

S/AP McFall and I were able to exit the aircraft without assistance or serious injury. The accident occurred directly in front of the Orange County Fire department hangar. There was also a Fullerton PD training event going on at the airport that morning. Because of these factors emergency personnel were next to the aircraft immediately. The aircraft sustained major damage. The tail boom had all but separated from the fuselage, the left skid had departed the aircraft and all three rotor blades were heavily damaged.

I gave a statement via a conference call with a representatives of the NTSB, FAA and Long Beach Flight Standards District Office. It was at the conclusion of this conference call that the NTSB released the aircraft to be moved from the runway. This movement was coordinated by Long Beach RO maintenance personnel and South Coast Helicopters located in a hangar on the Northwest corner of Fullerton Airport.

Before leaving Fullerton Airport I presented Ray Hanna of the FAA my license and medical certificate. Mr Hanna copied down my information and asked when my last biennial review had taken place. I provided the date of my last helicopter check ride (December 2016).

As the check airman on this flight I assume complete responsibility.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Re-emphasize or set a minimum airspeed limit during the execution of this maneuver below which the IP MUST take control of the aircraft and terminate the maneuver.
