NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Landed moose hunters near downed moose at approximately 1000 Alaska time. Great flying weather. Wind calm; no gusts; unlimited visibility; broken clouds; lowest clouds 4000 ASL / 1000 AGL. Scouted and identified best landing spot--tundra field with an uphill section at the end that would help ensure the aircraft would not nose-over. Loaded meat. Took off and flew to Lake Hood strip. Unloaded meat and added fuel. Departed Lake Hood strip at approximately noon with an empty aircraft. Flew back to moose site, arriving approximately 1300. Flew over the strip to assess conditions. Conditions appeared unchanged. Because it was a no-go-around strip, pulled mixture just before touchdown so the engine would not be running in case of a nose-over event--engine stopped during roll-out. Aircraft came to a complete stop on level ground, short of the up-hill section at the end. A gust of wind directly on the tail put the aircraft up on its nose, where it rested for approximately 10 seconds. Before pilot could exit the aircraft to pull down the tail, another gust of wind from directly astern pushed the plane slowly over its nose, bending its rudder in the process. The aircraft went straight over and neither wing touched the ground. The only control surface damaged was the rudder. After exiting aircraft, pilot observed intermittent gusty wind conditions for the next 15 minutes.

The next day, aircraft was rolled back over its nose using a come-along with no additional damage to the aircraft. Propellor and rudder were replaced and the aircraft was flown back to Lake Hood strip.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pilot could have minimized the chances of this accident in several ways:

1. Landed with weight in the aft baggage area
2. Chosen not to kill the engine and ensured the aircraft stopped on the up-hill section of the landing area
3. Picked a different landing area
4. Conducted additional assessment of the local wind conditions prior to landing
