Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Severe aircraft damage with left wing ripped off and extensive damage to fuselage, right wing and empennage. Aircraft crash landed into the rear of a residential home through rear window/wall causing extensive damage to the rear of the home.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I flew from Pensacola on Friday, 06OCT, and landed at W75 with about 10 gallons remaining. I filled up Saturday morning (54 gallons on board) and was planning to continue to New England. I checked the fuel during preflight as usual and I saw no water. I looked at the windsock as I finished my preflight and it was about 5 knots with a slight crosswind, but favoring 19. My plan was to back taxi and use the full length of 19. I looked at the windsock again as I was about to taxi and it was limp. I don't have a voice recorder so I'm paraphrasing from what I remember. During taxi, Unicom asked me my direction of travel. I said north. Unicom said that the winds were light and variable, not favoring a particular runway, and that no traffic was known to be inbound. He said I could use 01 if I wanted to be closer to course. At this point I was at the one taxi intersection with 01/19 and he said I could take off from there or back taxi and 180.

The taxiway intersection is not in the middle of the field. It is closer to the approach end of 01. But if you look at the taxiway diagram it is a short runway and the intersection cuts off a significant amount. I allowed this distraction to alter my plan and I elected to takeoff runway 01 from the intersection without fully considering the decision.

There are trees not far past the end of the runway. I don't normally climb at Vx, but as I saw the trees I pulled for Vx. I over-rotated and entered a power on stall. As I was barely over the treetops while I was attempting to correct, but the sight of the trees right beneath me tempered my forward pitch correction and I re-stalled. I lost lift on the left wing, rolling left. I did not have enough control to really pick a spot at that point, but I had enough rudder to keep the nose between the trees. Or I didn't and it was luck. I honestly can't say. It happened pretty fast by that point.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented by sticking with my original takeoff plan. I knew that my airplane was capable to using the full runway and clearing obstacles with my standard takeoff and climb. I should not have changed my plan without re-evaluating the available runway length from the intersection. Additionally I am not in the habit of briefing my spouse on the flight plan as she is not a pilot. However, had I brief her as I would have a co-pilot or student then she would have had to knowledge of the original plan and would have had the opportunity to question my decision to change said plan. It is also possible to takeoff from the intersection using a short field takeoff technique and going directly to a max performance Vx climb, but that is not a good plan either.
