Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing separated. Left wing separated. Nose wheel separated. Minor property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KFWN at approximately 11:30. Headed on course 104 using auto pilot. Attained altitude of 3500. Attempted to obtain flight following from NY ATC but unable to receive a response after several attempts.

Continued on course. Contacted KBDR notifying that I was transiting above their airspace. Received altimeter setting and permission to transit. Continued on course to Block Island. Tuned in ATIS for wind direction and Unicom to announce position.

Descended to 1100 MSL and announced entering pattern on a 45 degree downwind runway 28. I was 600 MSL starting final approach. Speed was 105 knots.

I landed approximately 150 ft beyond numbers. Immediately removed flaps and applied brakes.

I was unable to stop the forward momentum of the plane and believed that the plane would crash through the barriers at end of runway and end up on street.

I applied full power to execute a go around and immediately hit a chain link fence that I did not see with the nose wheel which caused the plane to become inverted.

I believe that both my wife and I remained conscience. When plane stopped rolling I immediately shut down all power and waited to be extracted from the plane.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Upon retrospection I believe that I came in too fast for this short runway. In the aftermath of the accident I was advised by several people that it is always better to run off the runway rather than try and execute a go around once the plane has landed due to the fact that most of the kinetic energy of the plane has already been used making it more difficult to execute the go around maneuver.

This was not discussed during training which I believe should be done.

At the time I attempted to execute the go around I believed that this was necessary to save my wife, my plane and myself from crashing onto the street and possibly causing injuries to others as well.
