Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft went on its nose which fractured the propeller then it went over onto its back. There are several dents in the leading edge of the top wing and the rudder is displaced about 2" below its normal position. There is some damage to the fabric on the rudder but no other damage to the fabric on the aircraft. There was no damage to property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A local flight was conducted under Part 91, in day VFR conditions. It departed around 1500L PST after about 15 minutes the aircraft did a full stop landing. During rollout on the full stop landing, the rear seat pilot began to apply brakes to decelerate the aircraft. There was a swerve to the left which was corrected briefly by applying right rudder and letting off the brakes. The aircraft then began a second more aggressive swerve to the left which was not corrected by full right rudder and brake. The aircraft departed the prepared surface at about 20 degrees off of runway alignment and entered the infield. The pilot attempted to parallel the runway on the infield but the soil was sandy, which caused the wheels dig in, putting the airplane on its nose. The propeller fractured and the plane momentarily rested on its nose, pirouetted slightly to the right then started over onto its back. Once the aircraft was resting on its back the front seat passenger was able to release their shoulder harness and lap belt. They then helped the pilot remove their lap belt and shoulder harness without issue. Neither the pilot or the passenger sustained any injuries. Due to its proximity to the runway, the aircraft was removed about 30 minutes after the accident and stored in a hangar on the airfield.

The aircraft came to a stop about 30 feet north of the edge of runway 8. The terrain in that area is flat with small desert vegetation growing out of sandy soil. There were several marks in the ground, one where the propeller came in contact with the soil, and another mark where the top wing leading edge contacted the ground during the pirouette before coming over on its back. The propeller was fractured but all the large components of it were attached. The tail was smashed down about 2" lower than its normal displacement with associated fabric wrinkling. The leading edge of the top wing sustained some dents but no fabric was torn. The aircraft was not damaged further during the recovery.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In the interest of safety I would be more careful in my application of the brakes and I would recommend that a different set, the "Redline" series of brakes be installed on the aircraft to reduce the likelihood of this incident happening again.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

It was suspected that the left brake may have been grabby and it is possible that it could have locked up.
Further investigation is needed to see if it is a possibility.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

Due to the aircraft being on it's back, an emergency egress was warranted. The front seat passenger was able to brace themselves on the top wing which allowed them to exit without injuring themselves. The passenger then helped the pilot lower himself out of the rear cockpit without injuring himself.
